Yash Saraiya
yashsaraiya49@gmail.com | +1 646-623-5273| https://www.linkedin.com/in/yash-saraiya-aa3206197/

Education

Georgia Institute of Technology | Atlanta, GA | BS in Computer Engineering and Minor in Computer Science Intelligence = 3.97 GPA | 2023

Skills

Languages: Python, Java, C, C++, C#, GoLang, Javascript, ReactJS, Typescript, HTML, SQL, Matlab, R, NodeJS, VHDL, Verilog, YAML, Shell
Hardware: Arduino, Breadboard, 3D Printing, Laser Cutting, Benchtop (soldering, circuit testing), PCB Design, MBED, Microcontrollers
Software: Android Studio, Eagle, Containers (Docker), Wireshark, Apache Spark, TensorFlow, Google Cloud Platform, Linux, Humio, AWS, Git
Coursework: Machine Learning, Computer Vision, Computer Architecture, Computer Networking**,** Intro to AI, Advanced Programming Techniques

Experience

Bloomberg LP | New York City, New York | *Software Engineer December 2023 – Present*

- Built and scaled high-performance Fixed Income trading systems (Sell-Side OMS) in C++, supporting price discovery, order execution, and venue-specific workflows across multiple asset classes using FIX messaging.
- Designed and optimized low-latency, distributed architectures leveraging Kafka, sharding, caching, and multithreading, identifying system bottlenecks and significantly improving throughput and reliability.
- Partnered with product managers and stakeholders to deliver new trading features end-to-end, from system design through production rollout.
- Strengthened system reliability and observability by defining SLIs/SLOs and building service health dashboards.
- Contributed to Bloomberg's internal AI platform; Developing an LLM-powered PR review bot, extending internal GitHub MCP tooling, automating dead code detection and removal using AI, and building a semantic code search (RAG) workflow enabling LLMs to quickly triage client issues and production crashes

Bloomberg LP | New York City, New York | *Software Engineering Intern May 2023 – August 2023*

- Intern on the Execution Management System Team under Trading Analytics department.
- Worked on enhancing features of internal tools used for identifying and analyzing failures in production.
- Reduced latency of internal tool by 5x for commonly used functions using multithreading. Helping engineers resolve client issues faster. • Familiarized and interacted with Humio API and Kafka messaging system.

Georgia Tech College of Computing | Atlanta, Georgia | *Undergraduate Teaching Assistant January 2021 – December 2023*

- Undergraduate TA for CS1332: Data Structures and Algorithms Java, CS2050: Discrete Math, and ECE4180: Embedded Systems Design C++
- Graded and gave in-depth feedback on assignments and exams.
- Held office hours to provide over 300 students additional help in concepts, testing, and debugging of code.

Cognosos Inc | Atlanta, Georgia | *Engineering Intern August 2022 – December 2022*

- Developed a CI/CD workflow using Github actions for automating hardware testing, when new code was pushed to Github.
- Automated Firmware validation, regression, unit, and board testing using python, pytests, YAML, shell scripts, and serial communication with embedded Linux devices and test equipment. Saved engineers over 2 days in validating firmware every time code was pushed.
- Wrote python scripts and used ElasticSearch, to upload logs of the automated tests to AWS OpenSearch for detailed analysis and querying.

NCR Corporation | Atlanta, Georgia | *Software Engineering Intern May 2022 – August 2022*

- Worked as a part of an agile scrum development team on 2 projects: Order Status board and Food Kiosk.
- Developed frontend for order status board using ReactJS and typescript as part of new functionality for clients.
- Coded a Go backend for the order status board integrating it with existing REST APIs, use websockets to send data to the frontend.
- Created a RESTful API in GoLang for communication between backend and frontend. Used postman for testing and debugging of the API.
- Wrote extensive unit tests, and automated integration testing using Behavior Driven Development (BDD)(Gherkin) in python.

NCR Corporation | Atlanta, Georgia | *Software Engineering Intern May 2021 – August 2021*

- Coded a multi-threaded C# GUI to parse, analyze, and upload customer Point of Sale(POS) logs to bigQuery.
- Created a micro-service pipeline in NodeJS using Google Cloud Platform (GCP), for customers to upload POS log files using a webapp (ReactJS), that parsed and converted the logs to JSON files, which were then uploaded to BigQuery.
- Created materialized views of parsed logs to reduce the cost and time of queries for uploaded logs. The materialized views were used for data aggregation and easy error detection in the case of failures. Saved over $100,000 and helped engineers find logs 3x faster than before.

Georgia Tech Research Institute | Atlanta, Georgia | *Undergraduate Research Assistant July 2020 – March 2021*

- Worked on developing accessible block coding based CS/Robotics for K12 students with learning disabilities, under the guidance of Dr. Mahender Mandala at the Human Computer interaction lab @Georgia Tech.
- Coded the functionality of the robot in C++. Used multithreading and Object-Oriented Programming concepts.

IDC Hive Makerspace January 2020 - December 2023

- Peer Instructor - supervise and taught 200 + end-users how to use equipment such as 3D printers, Laser cutters, machine shop
- Helping students test their circuits for projects or classwork using multimeters, wave form generators, etc.

Projects

GestureBot || Mbed Glove controlled Pi robot(2022)

- The robot would move in different directions based on hand gestures, there were buttons on the glove for speed and light control
- The mbed on the glove was coded in C++ and had multiple threads running concurrently to take readings from accelerometers, monitor button pushes, and update a local webserver hosted by a HazzuhFruit chip connected to the mbed.
- Assembled a robot car which was controlled by a Raspberry Pi 3. The Pi code (Python) utilized selenium as a webdriver to connect to the local server and scrape commands, making the robot perform the desired actions. Github: https://github.com/yash3090/ECE4180-GestureBot
